Overview

Private APIs are mapped to a specific VPC, these APIs are accessed within the VPC. To invoke the API one has to use a VPC endpoint link and pass the x-apigw-id of API in header and then access it, this makes the pattern difficult to manage.

AWS API gateway gives us the flexibility to host a specific domain and map the API gateway's to it using Custom domain feature. This domain becomes access point for all the users/applications trying to invoke a specific API. *Custom domain names* are simpler and more intuitive URLs that you can provide to your API users/applications. Custom domains are supported for Public API and to use it for Private API we would require to configure it via Route53 as explained in below diagram.

This setup also helps create a multi-region setup for API gateway which is provides high availability in case of region failures, AZ failure, low latency, secure and scalable.

Healthcheck setup

The healthcheck base setup is made in shared services account. Cloudwatch Event is created per account i.e new bian domain accounts and per region i.e us-east-1 and ca-central-1.

- Cloudwatch Event gets triggered every 5 min which targets a lambda function present in shared services account for particular account.
- Total 3 different targets are triggered pointing 3 different AZ's i.e 1 API gateway pointing to 3 different Lambda based on different paths.
- Analysis of region and availability zone can be done on this setup basis using Cloudwatch alarm.
- Cloudwatch alarm provides metrics for success and failure.
- In case of errors an SNS topic gets invoked which will alert the engineering team.
- This alarm is then used by Route53 which evaluates the result and can then point to Primary/Failover targets respectively.

Custom Domain

Created by Engineering team

[BMO CDK Supported Modules](#)

[@bmo-cdk/apigateway#%40bmocdk/apigateway-classBMOCustomDomainConstruct](#)

CDK - Custom Domain

- **AWS Limits custom domain name creation upto 120 per account per region**

```
const customdomain = new BMOCustomDomainConstruct(this, 'MyTestCustomDomainConstruct',{
  domainName: '<domainname>',
  regionalCertificateArn: '<certificate-arn>',
  endpointConfigurationType: ['REGIONAL'],
  exceptionCode:['E056'], --Repo permission to execute the exception should also be allowed
  tags: {
    "Cost_Center": "<CostCenter>",
    "AppCatID": "<AppCatID>",
    "Support-Team": "RUN_ENG_CLOUD_PLATFORM_SUPPORT", // for CIO - RUN_ENG_CLOUD_PLATFORM_SUPPORT, Cloud teams - BLD_ENG_CLOUD_ADOPTION / BLD_ENG_CLOUD_ORCHESTRATION / RUN_CLOUD_OPERATIONS /
    BLD_ENG_CLOUD_PLATFORM
    "Environment": "SBX",
    "Description": "test",
    "ServiceName": `${ServiceName}`,
    "Stage": "<Stage>"
  }
});
```

Create API-Mapping

[BMO CDK Supported Modules](#)

[@bmo-cdk/apigateway#%40bmocdk/apigateway-classBMOAPIMappingConstruct](#)

CDK - API Mapping

```
new BMOAPIMappingConstruct(this, 'MyApiMapping', {
  domainName: '<DomainName>',
  apiServiceName: `${ServiceName}`,
  restApiId: '<APIID>',
  stage: `${Stage}`
});
```

Testing

- To Test invoke the custom domain url - [https://<DOMAIN URL>/<API-PATH-AS-IN-MAPPING>/<API-RESOURCE-PATH>](#)
 - Sample - [https://digital-core-prod.api.hcloud.bmogc.net/prod/tie-hc-cdk-multiregion-healthcheck/availabilityzone1a](#)
Sample CURL command - curl -X POST --insecure [https://digital-core-prod.api.hcloud.bmogc.net/prod/tie-hc-cdk-multiregion-healthcheck/availabilityzone1a](#) -H 'Content-Type:application/json' -d '{"accountId": "test", "transactionType": "test", "transferAmount": "test", "accountBalance": "test" }'
 - Sample CURL command - curl -X POST --insecure [https://ent-dev.refdata.api.devhcloud.bmogc.net/dit1-test-api-deploy/something](#) -H 'Content-Type:application/json' -d '{"accountId": "test", "transactionType": "test", "transferAmount": "test", "accountBalance": "test" }'
{ "message": "Hello from dit1 ue1 in edrd1" }

---	--	---	---

Failover Testing

- First check the command trigger to custom domain url on successful trigger check the failover.
- To check the failover, one need to add the target IP's to the one which are not used - us-east-1, this will make the targets of ue1 unheathly and then the route will start pointing to ca1 region. (Target IP's to create the failover scenario - Check in network interface the available IP's not mapped to VPC)

Developer Guide

Note: We don't have common SSM created for Custom Domain names to access either old or new centralized NLB in new accounts. Please use a switch case to differentiate between environments.

For example,

```
switch(environment){
  case 'dev':
    domainName = 'ent-dev.salesserv.api.devhcloud.bmogc.net';
    break;
  case 'tst':
    domainName = 'ent-tst.salesserv.api.devhcloud.bmogc.net';
    break;
  case 'prd':
    domainName = 'ent.salesserv.api.hcloud.bmogc.net';
    break;
}
const apimapping= new BMOAPIMappingConstruct(this, 'MyApiMapping', {
  domainName: `${domainName}`,
  apiServiceName: `${ServiceName}`,
  restApiId: apiId,
  stage: `${Stage}`
});
```

Resource Repositories

Enterprise Business Domain

Custom Domains - https://github.com/BMO-Prod/CENG_enterprise-custom-domains_TU9756

Multi Region HealthCheck - https://github.com/BMO-Prod/CENG_enterprise-multiregion-healthcheck_TU5880

Healthcheck Failover (WIP)

Short term:

- Disable failover - Atta, Zuha/Patel, Aditi1 can you please work with platform team to do this in all environment? and document this in our confluence
- Introduce manual failover after automated notification through ServiceNow
 - Target date would be before DigitalCore starts using multi-region - right now they're APIs are single region, so we have a bit of time but we don't want to put this off
 - Jignesh will setup a call with us next week to go over this. We will work on a PoC for this and later implement something here (we will add this to the planned items in Q3, we will have to shift some other items to make room for this)

Long term:

- Plan a pattern for service-specific failover
- Enable a view of which services are enabled with multi-region

AWS Suggested - This is the manual failover AWS suggested: [https://urldefense.com/v3/_https://aws.amazon.com/blogs/networking-and-content-delivery/creating-disaster-recovery-mechanisms-using-amazon-route-53/_;!!O9lNpA!!Kp_rFCVDxiBQRIYg9Vc-l4-34R7rcOrNqytMph6aWtzP5r1nVGUGVU5nwMSRiyDkVpHErn-RSrmUmZGZl4wZQ\\$](https://urldefense.com/v3/_https://aws.amazon.com/blogs/networking-and-content-delivery/creating-disaster-recovery-mechanisms-using-amazon-route-53/_;!!O9lNpA!!Kp_rFCVDxiBQRIYg9Vc-l4-34R7rcOrNqytMph6aWtzP5r1nVGUGVU5nwMSRiyDkVpHErn-RSrmUmZGZl4wZQ$)

Disabling Healthcheck

[SERVERLESS-5297](#) - Getting issue details... STATUS

Testing done on old account dev healthcheck (not in use)

- Set prop Disabled as true under HealthCheck Config https://docs.aws.amazon.com/Route53/latest/APIReference/API_HealthCheckConfig.html . To be done manually via console since this is an api call and not available under cfn resource prop. <https://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/aws-properties-route53-healthcheck-healthcheckconfig.html>

	Name	Status
<input type="checkbox"/>	dev-ue1-tie-hc-cdk-multiregion-h...	<div>a day ago18 minutes ago</div> Healthy
<input checked="" type="checkbox"/>	dev-ca1-tie-hc-cdk-multiregion-h...	<div>a day ago14 minutes ago</div> Healthy

InfoMonitoringAlarmsTagsHealth checkersLatency

status is **unhealthy**

When the alarm is in the OK state, the status is **healthy**

When the alarm is in the ALARM state, the status is **unhealthy**

Invert health check statusNo

Disable health checkYes

- Hit API via custom domain , goes to primary region ca1

```
Cloud-Serverless-Admin-Role~/environment $ curl -X POST --insecure https://digital-core-dev-api.dnfccloud.bmgc.net/dev/tie-hc-cdk-multiregion-healthcheck/availabilityzomeia -H 'Content-Type:application/json' -d '{"accountId": "test", "transactionType": "test", "transferAmount": "test", "accountBalance": "test"}'
{"message":"Hello from dev-ca-central-1a"}Cloud-Serverless-Admin-Role~/environment $
```

- In the background, destabilize nlb target ips to trigger healthcheck error alarm

- Route 53 Healthcheck shows healthy since we enabled disable healthcheck
